Dear Mn

Reference our telephone coversation of 13 May 55 regarding your unidentified observation on the night of 12 Jul 54. Attached is FTD Form 164 for you till fill out along with a self-addressed envelope. I would appreciate your filling this form out as somn as possible to enable us to have a more comprehensive investigation of your sighting.

Sincerely,

DR J ALLEN HYNEK

Call to Kenthern Air Service, area code Dr J Allen Eynek spoke with him on 13 May 65 regarding his observation of 17 Jul 64.

was coming back from straits, South of Kulton Lake, heading 220 deg, flying at altitude of 4500 ft. Out of my eye to the left, 7 o'clock, saw four lights coming up rapidly about llpm, first thought it was another airliner, airliner doesn't look like this, my speed was 150, was just about ready to change course then they came around the left and gained speed, they just came up fast, as they approached, two more lights, at first very dimm, came up behind and stayed at 8 o'clock position, followed for about five minutes, disappeared (two top lights dimmed and faded back), saw formations of bombers and it was definitely not an airplane.

Moon and stars were out. There was a haze layer. Flying at 4500 alt. There were other people on the plane, they were sleeping, you just don't tell your passengers, that you think you're going to be hit. So busy trying to figure out what it was, no time to awake anybody. Thought flying saucers were possible but not probable. Has this subject (UFOs) come up much among the pilots he associates with? Yes, but so many people are skeptics about it that no one cares to say something about it.

Was there a change in intensity of the lights you saw? Just the two top lights, dimmed. There was no reflection, it just wasn't an airplane, at that rate of speed they would have closed in and passed me. A jet cannot slow up that fast. There was something and it wasn't an airplane, sure would like to find out. Pattern: a set formation, stayed together, they could have been attached, each light was larger than a star, quite a bit brighter than a star, no difficulty in seeing the object, haze layer very thin, two on top of plane, two on edge of bottom of plane and two in middle, like steps. They were definitely being flown by someone with intelligence. Its just impossible for something to come up and stay, definitely something there. Didn't want any advertising about seeing this object; just curious to know what he saw. Didn't try to contact anyone. Circular and not fuzzy. Two top lights dimmed, lower lights seemed to drift behind, watched them as they drifted back, when I looked back they weren't there.

FURTHER CENERAL COMMENTS: Mr seemed to be most impressed by the rapid approach of lights and their sudden deceleration. He fully expected them to pass him, and he was preparing to take evasive action to prevent collision. Instead, the lights came up to about his 8 or 9 o'clock position "stayed on my wing" and followed him for five minutes. When he first saw them "his heart fell to his feet". "Never saw enything like it". Objects were only 200-300 feet away.

Lights might have been physically attached - or they could have been craft flying in close and exact formation. Brighter than stars. "You have to sort of look for the stars - these were right there to see easily". Lights seemed centered on line: 2 above wing, 2 on line and 2 below wing. Objects disappeared suddenly.

Above is report by Dr J Allen Hynek regarding his conversation with
